Service and Parts Operations

MAC'S AUTO REPAIR is proud to introduce O/E dealer level diagnostics and computer reprogramming on all G.M. models, including Saab, Saturn and Suzuki.

No longer are you **forced** to go to the dealer for non-warranty repairs that are **not covered** by the manufacturer.

We offer independent shop pricing to combat the monopolized dealer reprogramming services.

We can handle control module replacements with re-flashes and firmware updates to correct those erroneous issues with no parts to blame.

Take advantage of our **free check** of your current software and be provided a list of available updates for you vehicle and the corrections they are for.

We gladly welcome other shops without worry of us soliciting your customers.

ACDelco®

WE HAVE IT!
